O'zbekiston Respublikasi Aloqa,Axborotlashtirish va Telekommunikatsiya Texnologiyalari Davlat Qo'mitasi

Toshkent Axborot Texnologiyalari Universiteti

DIF fakulteti

ATDT kafedrasi

"OYDT" fanidan

KURS ISHI

Mavzu:Talabalar turar joyini axborot tizimi.

Guruh: 215-12

Bajardi: Yo'ldoshev A.

Tekshirdi: Karaxanov N

Toshkent - 2015

Mundarija

Kirish

Informatika vositalari jamiyatimizning barcha jabhalariga tobora kirib borayotgani, axborotni tez va sifatli qayta ishlash malakasi o'sib kelayotgan har bir yoshning turmush talabiga aylanishini ko'rsatib bermoqda.

Obektga yo'naltirilgan dasturlash tili fanining asosiy maqsadi foydalanuvchilar uchun EXMlarda ishlashni oson va qulaylashtirish, ularni vaqtlarini tejash va dasturlar yaratib foydalanuvchilarni ishini osonlashtirish va yaratilgan dasturlarni hayotning turli jabhalarida qo'llashdan iborat. Obektga yo'naltirilgan dasturlash tili fanidan kurs ishi tayyorlash mobaynida men Java dasturlash tili bilan, Microsoft Access dasturni Java dasturiga bog'lab ishlash bo'yicha tajribalarimni yanada oshirib Java muhiti bilan chuqurroq tanishaman. Ko'pgina yangi kompanentalar bilan tanishib, ular ustida ishlash ko'nikmasini ortirishga harakat qilaman. Kurs ishimni bajarib, Microsoft Office Access 2010 va Java dasturlari bilan ishlashni o'rganaman.

Accessda yangi satrlar, yangi ustunlar xosil qilishni, ularga ishlov berishni o'rganaman. Jadvallarni xosil qilishning oddiy va konstruktor rejimlarini o'rganib chiqaman. Xosil qilingan jadvallarni bir biriga bog'lash orqali ma'lumotlar sxemasini tuzishni o'rganaman. Xosil qilingan ma'lumotlar bazasini ximoyalash uchun uni kodlashni o'rganaman.

Java dasturlash tilida dastur yaratishda ishlatiladigan operatorlar, java swing bilan ishlashni va undan dastur tuzishda foydalanishni, klaslar bilan ishlashni, obyekt yaratib, obyektlar ustida ishlash kabilarni o'rganib ulardan dastur tuzishda foydalanishni o'rganaman.

Men kurs ishimda "Talabalar turar joyini avtomatlashtirish" mavzusini tanladim. Chunki har bir o'quv muassasidagi kutubxonalar yoki shahrimizdagi har bir kutubxonalarda kitobxonlarga kitoblar berish, ularni qaytarish va kerakli kitoblarni izlashda kutubxona xodimlari vaqtini yuqotadi. Agarda kutubxona ishini avtomatlashtirsak bunda xodimlar ishi osonlashadi va kerakli kitoblar bor yuqligi, ular soni nechtaligi yoki qaysi kitobxondaligi, qachon qaytarilishi lozimligi har biri kompyuterga kiritilib borilsa shunda kutubxona xodimlari ishi yengillashadi. Java dasturlash tilida tuzadigan dasturim esa ma'lumotlardan foydalanishda va ularni qayta ishlashda vizual formalar orqali foydalanuvchiga ko'maklashadi. Bu esa albatta vaqtni tejashga yordam beradi.

2. Nazariy qism .

2.1 Java dasturlash tili haqida.

Java dasturlash tili - eng yaxshi dasturlash tillaridan biri bo'lib unda korporativ darajadagi mahsulotlarni(dasturlarni) yaratish mumkin. Bu dasturlash tili **Oak**dasturlash tili asosida paydo bo'ldi. Oak(ma'nosi eman daraxti) dasturlash tili 90-yillarning boshida **Sun Microsystems**(hozirda **Oracle** nomidan ish yuritadi) tomonidan platformaga(operatsion tizimga) bog'liq bo'lmagan holda ishlovchi yangi avlod aqlli qurilmalarini yaratishni maqsad qilib harakat boshlagan edi. Bunga erishish uchun Sun hodimlari **C++** ni ishlatishni rejalashtirdilar, lekin ba'zi sabablarga ko'ra bu fikridan voz kechishdi. Oak muvofaqiyatsiz chiqdi va 1995-yilda Sun uning nomini **Java** ga almashtirdi, va uni WWW rivojlanishiga hizmat qilishi uchun ma'lum o'zgarishlar qilishdi.

Java 1990 yillarda ishlab chiqarila boshlangan bo'lsa ham, uning birinchi versiyasi(**Java 1.0**) 1996 yil ommaga taqdim etilgan. Undan so'ng keyingi versiyalar sekin-astalik bilan chiqa boshladi: **1998 yil - Java 2, 2004 yil - Java 5.0, 2006 yil - Java 6, 2011 yil - Java 7, 2014 yil - Java 8.**

Java **Obyektga Yo'naltirilgan Dasturlash**(OOP-object oriented programming, ООП) tili va u C++ ga ancha o'xshash. Eng ko'p yo'l qo'yildigan xatolarga sabab bo'luvchi qismalari olib tashlanib, Java dasturlash tili ancha soddalashtirildi.

Java texnologiyasi o'ta sodda, xavfsizlikni yuqori darajada ta'minlab bera oladigan, kuchli, to'la obyektga yo'naltirilgan dasturlash tili bo'lib, muhit (platforma)ga bo'liq bo'lmagan holda ishlaydi. U bilan xatto eng kichik qurilmalarga ham dasturlar yozish mumkin. Java texnologiyasi to'laligicha **Java Virtual Machine(JVM)** ga asoslangan. JVM ning vazifasi tarjimonlik ya'ni, dastlab biz yozgan ***.java** fayl kompilyator yordamida **bayt kod**ga o'giriladi va JVM yordamida esa mashina tiliga aylantiriladi. Bu degani JVM qaysi platformaga tegishli bo'lsa, kodlarni ham o'sha platformaga moslab beradi.

JAVA imkoniyatlar:

- WORA - Write Once, Run Anywhere (portable). Platforma tanlamaydi;
- havfsizlik (ishonch yuq kodni havfsiz ishga tushirish);
- hotirani havfsiz boshqarish (avtomat ravishda musorlarni yig’adi);
- tarmoq uchun dasturlar yozish ;
- ko’p oqimli (Multi-thread) dasturlash;

- dinamik & kengaytirish;

-Class lar alohida fayllarda saqlanadi. Kerak bo’lsa ishlatiladi. Dinamik ravishda imkoniyatini oshirish xam mumkin kerak bo’lsa.

Java texnologiyalari

Java SE (Java Standart Edition) - serverda, shaxsiy kompyuterda desktoplarda ishlovchi dasturlar, appletlar yaratish uchun ishlatiladi. Bu texnologiya yordamida yaratilgan dasturlar deyarli barcha operatsion tizimlarda ishlay oladi(**Windows NT, Macintosh,Linux va Solaris**). Shu bilan birga JavaSE boshqa Java turlarining asosi hisoblanadi.

Java EE (Java Enterprise Edition) - Java texnologiyalari orasida eng keng tarqalgan turi xisoblanib unda asosan serverda ishlovchi dasturlar yaratiladi, masalan ko'p foydalanuvchili web-saytlar yaratishda keng qo'llaniladi va asosan internetda ishlovchi dasturlarda qo'llaniladi. Java SE ni Java EE dan eng asosiy farqi Java EE o'z tarkibiga Java SE ni olibgina qolmay shu bilan birga ko'pgina boshqa qo'shimcha kutubxonalarni(odatda ***.jar)** ham o'z ichiga oladi ya'ni: **Servlet, JavaMail, JSF(Java Server Face)** va boshqa ko'pgina internetga asoslangan qoshimcha kutubxonalar.

Java ME (Java Micro Edition) - Java SE ning ba'zi qismlarini o'z ichiga oladi, JavaME yordamida kichik qurilmalar uchun dastrular yozish mumkin, masalan, mobil telefon uchun o'yinlar, dasturlar yaratish mumkin.

Javada kompilyator aytib o'tganimizdek biz yozgan kodni bayt-kodga o'giradi, odatda kompilatsiyadan o'tgan klasslar ***.class** qisqartirmasi bilan tugaydi va kompilatsiyadan o'tgan klassni Java Virtual Machine(JVM) ga yuklanadi va bayt-kodli fayllarni interpretatsiya qiladi, ya'ni mashina tiliga o'giradi va shu bilan birga undagi kodni imkoni boricha optimallashtiradi.

Java dasturlash tilida dastur tuzish uchun, dastlab, kompyuterga kerakli dasturlarni o‘rnatish lozim. Birinchidan, Java dasturlarni ishga tushirish uchun, bizga **Java-mashina** kerak bo‘ladi. Gap shundaki, barcha Java dasturlar faqat Java-mashina o‘rnatilgan kompyuterlarda ishlaydi. Java-mashina Java dastur uchun muhit hisoblanadi. Ikkinchidan, Java dasturlarni yozish uchun maxsus muhit**(IDE)** kerak bo‘ladi. Ikkala dasturni ham oraclening saytidan yuklab olishingiz mumkin. Yuklab olish uchun Oracle saytiga kiramiz va Java Platform(**JDK**)ni yuklab olamiz.

JDKni yuklab oladigan oynaga o‘tamiz va litsenziyaga rozi bo‘lamiz(**Accept License Agreement**). Undan so‘ng kompyuteringizga mos keladigan JDKni tanlaymiz, agar 32 bitlik tizim bo‘lsa, "**jdk-8u20-windows-i586.exe**"ni tanlaymiz va yuklashni boshlaymiz.

Product / File Description	File Size	Download
Linux x86	135.24 MB	jdk-8u20-linux-i586.rpm
Linux x86	154.87 MB	jdk-8u20-linux-i586.tar.gz
Linux x64	135.6 MB	jdk-8u20-linux-x64.rpm
Linux x64	153.42 MB	jdk-8u20-linux-x64.tar.gz
Mac OS X x64	209.11 MB	jdk-8u20-macosx-x64.dmg
Solaris SPARC 64-bit (SVR4 package)	137.02 MB	jdk-8u20-solaris-sparcv9.tar.Z
Solaris SPARC 64-bit	97.09 MB	jdk-8u20-solaris-sparcv9.tar.gz
Solaris x64 (SVR4 package)	137.16 MB	jdk-8u20-solaris-x64.tar.Z
Solaris x64	94.22 MB	jdk-8u20-solaris-x64.tar.gz
Windows x86	161.08 MB	jdk-8u20-windows-i586.exe
Windows x64	173.08 MB	jdk-8u20-windows-x64.exe

Yuklab olingandan so‘ng, dasturni ishga tushiramiz va berilgan savollarga qarab o‘rnatamiz(unchalik qiyiin ish emas va ko‘p vaqt ham kerak emas).

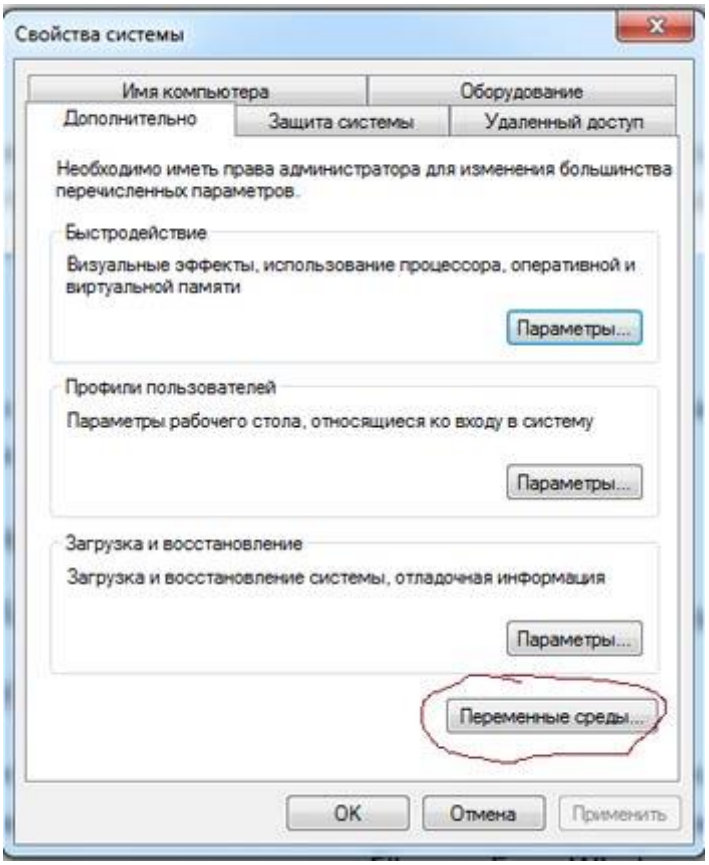
Odatda JDK "**C:\Program files\Java**" adresiga o‘rnatiladi

Keling endi, java bajaruvchi utilitlarini topamiz. Uning uchun quyidagi papkaga kiramiz:

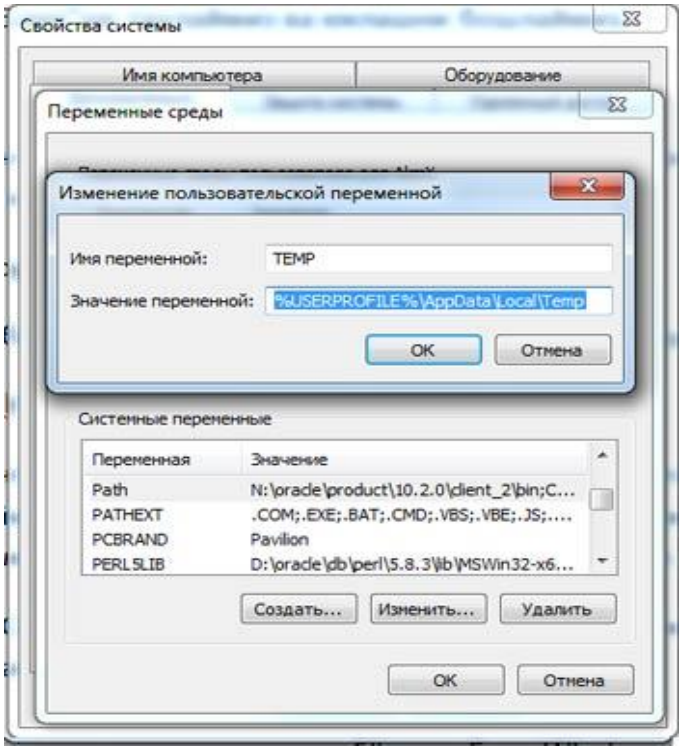
C:\Program files\jdk*\bin

Bu adresda JDKning barcha bajariluvchi fayllari joylashgan. Biz ularni, operatsion tizimga ham ma'lum qilib qo‘yishimiz lozim. Operatsion tizim bularni bilib olsa, bemalol "**Командная строка**" orqali ham ishlatishimiz mumkin bo‘ladi. Buni **Windows 7** misolida ko‘rsataman.

Мой компьютер->Свойства, chap tomonda "**Дополнительные параметры системы**" bo‘limiga kiramiz va quyidagi oynani ko‘ramiz.



Bu oynadan "**Переменные среды**" tugmasini bosamiz, hosil bo‘lgan oynaning "**Системные переменные**" bo‘limidan "PATH" o‘zgaruvchisini(переменная)qidirib, uni belgilaymiz va "**Изменить**" tugmasini bosamiz.



Shundan so‘ng, "**Значение переменной**"dagi qiymatlarning oxiriga o‘tamiz va "**C:\Program Files\Java\jdk*\bin**" adresini kiritamiz(***** o‘rniga o‘zingizning jdk adresingiz bo‘ladi, ya'ni mavjud papka nomi). "**OK**" tugmalarini bosib, bu oynalardan chiqib ketamiz va kompyuterni qayta yuklaymiz.

Hozircha shu, xulosa qiladigan bo‘lsak, biz bu maqolada, o‘zida Java kompilyatorni saqlaydigan, qaysiki biz yozgan Java kodlarni bayt kodga(kompyuter tushunadigan kodga) o‘tkazib beradigan, undan tashqari yozilgan kodlarni ishlatish uchun kerak bo‘ladigan Java-mashinani ham o‘zida mujassam etgan JDK(**Java Development Kit**)ni yuklashni, o‘rnatishni va operatsion tizimga o‘rnatilgan joyini e'lon qilishni ko‘rib chiqdik.

Navbat, Java dasturlash tilining asosi va uning strukturasiga keldi. Barcha narsaning asosini bilib olsangiz, har qanday murakkab holni ham tushunish mumkin bo‘ladi. Nafaqat dasturlash, balki istalgan yo‘nalish, soha yoki biror bir tushunchani mukammal bilish uchun, dastlab uning strukturasini(nimalardan tashkil topganini)bilish, o‘rganishning asosiy va to‘g‘ri harakati bo‘ladi

JAVA ning C & C++ dan ustunligi

- WORA - Write Once, Run Anywhere (portable).
- Havfsizlik (ishonch yuq kodni havfsiz ishga tushirish).
- Hotirani havfsiz boshqarish (avtomat ravishda musorlarni yig’adi)
- Tarmoqga dasturlash
- Ko’p oqimli (Multi-thread) dasturlash
- Dinamik & kengaytirish
- Class lar alohida fayllarda saqlanadi
- Kerak bo’lsa ishlatiladi
- Dinamik ravishda imkoniyatini oshirish xam mumkin kerak bo’lsa.

Quyidagi farqlar bilan Java C/C++ dan ajralib turadi

- header fayllar yo’q
- Preprocessor’lar yo’q
- Goto yo’q
- Unicode belgilar
- Avtomat musorlarni yig’adi
- Ko’rsatkich (pointer) yo’q
- Operatorlarni peregruzga qilish yo’q
- 100% OYDT – hamma narsa class
- Global o’zgaruvchi va funksiyalar yo’q

Java dasturlash tili James Gosling tomonidan yaratilgan. Java'ning birinchi nomi "Oak" bo'lgan. Birinchi ofitsialniy versiya - Java 1.0, 1995-96 yil taqdim qilingan. Java tilida yozilgan oddiy dasturning strukturasi va komentariya tushunchasi NetBeans IDE muhitida dastur yaratiladi.

```
1  class test {
2  public static void main(String[] args){
3  System.out.println("HellO WorlD");>
4  }
5  }
```

Java dasturlash tili registrga bog'liq bulgan dasturlash tili hisoblanadi. Agar biz dasturdagi "main" so'zini "mAin" deb yozsak. NetBeansning quyi qismida xatolik haqida ma'lumot chiqadi. Demak, so'zlarning katta-kichikligiga ahamiyat beriladi.

Ikkinchi qatordagi "public" kalit so'zi, ruxsatni anglatadi, ya'ni dasturni istalgan joyidan shu nomli klasga murojat qilish mumkin bo'ladi.

"class" kalit so"zi, bu degani dasturdagi hamma kodlar klas ichida joylashadi va bu klass "test" deb ataladi. Klass bu – dastur uchun konteyner hisoblanadi. Barcha Java dasturida kamida bitta klass mavjud bo'ladi, murakkab dasturlarda bittadan ham ko'p bo'lishi mumkin. Klass nomi dasturchi tomonidan quyidagi qoidalarga rioya qilingan holda beriladi.

Klas nomi harfdan boshlanishi kerak

Klas nomida faqat harf va sonlar ishtirok etishi mumkin

Uzunligi siz hohlagancha bulishi mumkin(kichikroq va tushunarli bulgani ma'qul)

Klas nomi sifatida maxsus zaxira so'zlari ishtirok etmasligi lozim

Odatda klas nomi katta harfdan iborat buladi(bizning holda bunday emas)

Agar bir nechta so'zdan iborat bo'lsa, ularning bosh harflari katta harflardan yozilishi (tuya stili) odat bo'lib qolgan (Test Variable)

Klas nomi shu klas saqlangan fayl nomi bilan bir xil bo'lishi kerak. Agar asosiyklas nomi "test"bo'lsa kod saqlangan fayl nomi ham "test" bo'lishi lozim. Shu bilan birga registr (katta kichik harf) ham bir xil bo'lishi shart. Fayl kengaytmasi ".java" bo'lishi kerak.

Agar dastur to'g'ri yozilgan va to'g'ri nomlangan bo'lsa, kompilyatsiyadan so'ng bayt kod hosil bo'ladi va u asosiy klas nomi kabi nomlanadi. Lekin kengaytmasi ".class" ya'ni "test.class" ko'rinishida bo'ladi.

Yozilgan kod "Javac" kompilyatori yordamida bayt-kodga aylantiriladi va "Java" interpreratoridan foydalanib, dastur ishga tushadi. Interprerator o'z ishini "main" metodidan boshlaydi shuning uchun har bir kodda bu metod bo'lishi lozim.

Koddagi figurali qavslar ({ }) alohida blokka olish uchun ishlatiladi. Barcha dasturlar alohida blok hisoblanadi. Shuning uchun klas nomidan keyin qavs ochiladi va oxirida yopiladi.

Dastur ichidagi alohida bloklar dastur metodlari hisoblanadi. Misolda “main” metodi dastur ichida joylashgan va qavs bilan ajratilgan. Bu qavslar metod boshlanishi va tugashini bildiradi.

Metod ichida ekranga chiqaruvchi buyruq (System.out.println) berilgan, bu operator deyiladi. Bu Dasturda operatorlar soni bitta va oxirida nuqta-vergul (;) bilan tugatilmoqda.

Java dasturlash tilida boshqa tillarda bo’lgan singari komentariyalar mavjud. Kommentariyalar kompilyator tomonidan inobatga olinmaydi ulardan dasturchilar o’z kodlarini tushintirishda foydalanishadi. Kommentariyadan foydalanilgan kodlarni , keyinchalik ochib ko’rganda, nima vazifa bajarilganini tez anglab olish mumkin. Komentariyaning quyidagi turlari mavjud:

Bir qatorli komentariyalar (//). Faqat bir qatorni kommentariyaga oladi, misol

```
1  class test {  //bu yerda klass e'lon qilinmoqda.
2  public static void main(String[] args){
3  System.out.println("HellO WorlD");
4  }
5  }
```

Berilgan izoh kompilyator tomonidan qaralmaydi, shuning uchun xatolik bo’lmaydi.

Ko’p qatorli kommentariya. “ /* ” belgilar bilan boshlanib “ */ ” belgilar bilan tugaydigan kommentariya turi. Bunda, shu blok orasidagi barcha yozuv kommentariyaga o’tadi. Misol,

```
1  class test {
2  /* public static void main(String[] args){
3  System.out.println("HellO WorlD");
4  }   */
5  }
```

Kompilyator klas ichidagi barcha kodlarni inobatga olmaydi.

2.2 Malumotlar bazasi

Oracle (**Ma’lumotlar Bazasini Boshqarish Tizimi**) – katta hajmdagi ma’lumotlarni boshqarish, ulardan kerakli ma’lumotlarni so’rov orqali istalgan ko’rinishda chiqarib olish, ma’lumotlarning zahira nusxalarini olish, katta xajmdagi ma’lumotlarni siqish, qulay interfeysda baza ustidan nazorat o’rnatish, ma’lumotlar asosida hisobotlar hosil qilish va bulardan boshqa ma’lumotlar ustida juda katta ko’lamdagi ishlarni amalga oshiradigan dasturiy kompleksdir. Oracle dasturini server va klient ko’rinishida o’rnatish mumkin va berilgan ruxsat doirasida ishlatish mumkin. Bu dastur asosan katta xajmdagi ma’lumotlar bilin

ishlaganligi uchun , asosan yirik korxonalarda ishlatiladi. Bu dasturning asosini ma’lumotlar bazasi tushunchasi tashkil etadi.

Ma’lumotlar bazasi – bu serverda joylashgan bir yoki bir necha fayllardan tashkil topgan, shu serverga yig’iladigan va so’rovlar orqali nazorat qilib boriladigan ma’lumotlardir. Ma’lumotlar bazasi mantiqiy va jismoniy ko’rinishda bo’lishi mumkin. Mantiqiy ko’rinishdagi ma'lumotlar bazasining asosini jadvallar tashkil etadi. Jadvallar ustun va qatorlardan tashkil topgan bo’lib, ular birlashgan joy(yacheyka) da ma’lumotlarni saqlaydi. Bu ko’rinishdagi ma’lumotlar bazasi relyatsion ma’lumotlar bazasi deyiladi. Baza eng kamida jadvaldan tashkil topgan bo’lishi shart, bu shart ma’lumotlar bazasi mavjud bo’lishning eng minimum shartidir

Bazada saqlanayotgan ma’lumotlarni xafsizligini saqlash maqsadida Oracle(MBBT) da juda ko’p ishlar amalga oshirilgan, biz ularni keyingi maqolalarda ko’ramiz. Ma’lumotlar bazasini tashkil etgan fayllarni: ma’lumotlar bazasi fayllari va ma’lumotlar bazasiga tegishli bo’lmagan fayllar ko’rinishida ajratishimiz mumkin. Ma’lumotlar bazasi fayllarida ma’lumotlar saqlanadi, ma'lumotlar bazasiga tegishli bo’lmagan fayllarda har xil protokollar, sozlashlar kabi qo’shimcha ma’lumotlar saqlanadi. Bu ma’lumotlar bilan Oracle administratorlari ruxsat bergan foydalanuvchilargina ishlay oladi

Oracle ning juda ko’p utilitlari (Rman, Oracle Data Guard, Oracle Data Grid) mavjud bo’lib, ular ham ma’lumotlarni foydalanuvchi uchun qulay ko’rinishda taqdim etish(boshqarish, nazorat qilish) uchun ishlatiladi. Misol tariqasida Rman utilitasini oladigan bo’lsak, bu utilita bazani to’liq yoki qisman zahira nusxalarini juda katta xajmga kamaytirib(siqib) hosil qiladi va saqlash uchun o’zi chunarli bo’lgan kodlarga aylantiradi. Bazaga shikast etganda shu zahira nusha orqali bazani qayta tiklash mumkin bo’ladi.

Oracle SQL kodlari orqali buyruqlarni qabul qiladi. Bu so’rov tili ma’lumotlar bazasini yuklash, uni to’xtatish, montirovka qilish, jadvallar yaratish, o’chirish, o’zgartirish, ma’lumotlar ichidan kerakligini chiqarib olish va boshqa vazifalar uchun ishlatiladi. Bu til juda ko’p **Ma’lumotlar Bazasini Boshqarish Tizim** lari uchun umumiy hisoblanadi. SQL kodlari bir yoki bir necha jadvallar ustida so’rovlarni amalga oshira oladi

Ma’lumotlarni boshqarishda foydalanuvchilarga qulaylik yaratish maqsadida Oracle dasturi yaratuvchilari **Oracle Enterprise Manager** deb nomlangan web sahifa yaratishgan bo’lib, bu sahifa orqali butun Oracle ni boshqarish mumkin bo’ladi. SQL kodlarini bilmaydigan foydalanuvchilar ham bu web sahifa orqali barcha vazifalarni bajarishi mumkin, faqatgina kerakli **“silka”** larni bosish kifoya. Har bir ma’lumotlar bazasi uchun alohida-alohida Enterprise Manager sahifasi

bo’ladi, har bir sahifa portlar orqali ajratiladi. Barcha brauzerlarda bu sahifa yaxshi namoyon bo’ladi va bazani xafsizligiga portlarni boshqarish yo’li bilan erishish mumkindir.

2.3 Java Swing

JAVA uchun GUI Framework

• JAVA dasturlarini “look and feel” holatiga keltirish

• Java Foundation Classes (Sun Microsystems) bir qismi

• IFC (Netscape) va JFC (Sun Microsystems) qo’shilgani

• Java Standard Edition 1.2 versiyasidan boshlab paket shaklida qo’shilgan

• GUI controllar java dastur orqali generatsiya qilinadi

• Ko’rinishi va funksionallkin jihatidan Windows, Mac va Linux OS’laridaka

Java Swing Component’larini o’zgartirish uchun dasturlar

Etima, Jvider, Jgo, Visual Java (**SWING) Components**

Library, GUI Commands

Software Development Environments (SDE) for Eclipse,

Netbeans, SunOne, Jbuilder

Raqobatchi Java texnologiyalar

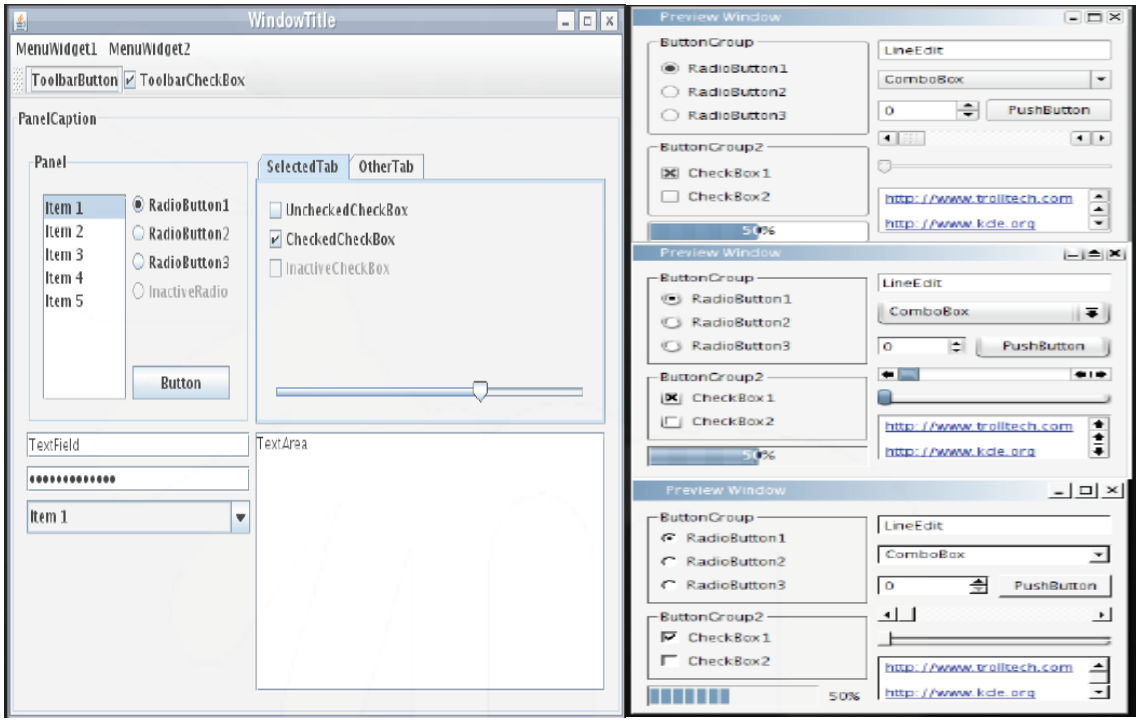
Standard Widget Toolkit, SWT, open source widget

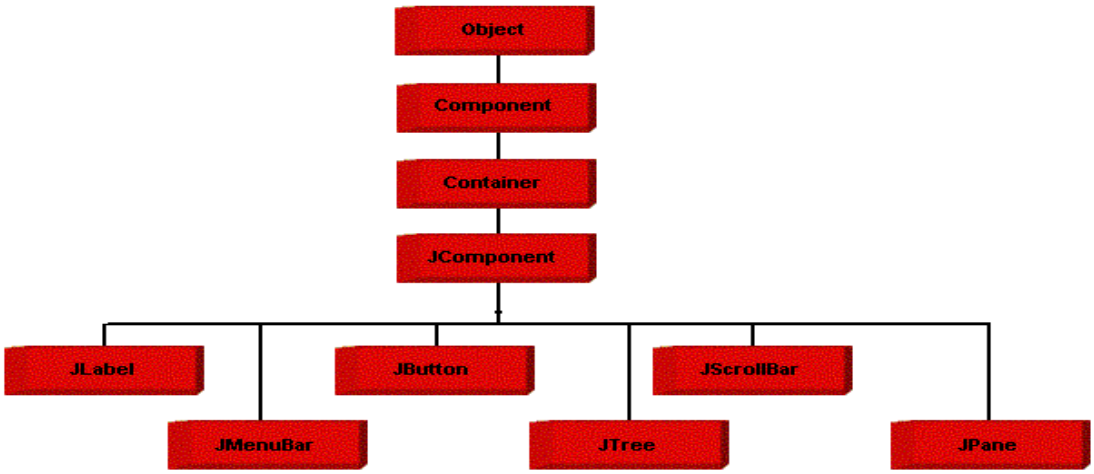
Toolkit Eclipse uchun

http://www.eclipse.org/swt/

Abstract Windows Toolkit, AWT, Java’ning original platforma widget toolkit.

http://java.sun.com/products/jfc/download.html



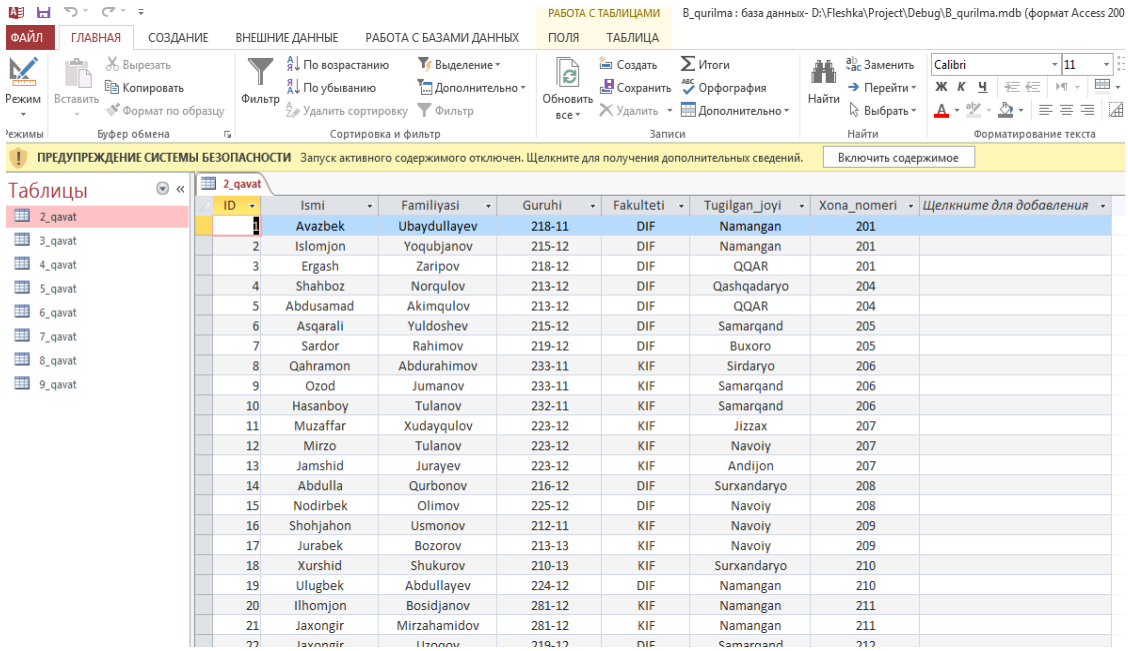


```
import javax.swing.JFrame;
import javax.swing.JLabel;
public class HelloWorldFrame extends JFrame {
public static void main(String args[]) {
new HelloWorldFrame();  }
HelloWorldFrame() {
JLabel jlbHelloWorld = new JLabel("Hello World");
add(jlbHelloWorld);
this.setSize(100, 100);
setVisible(true);}
}
import javax.swing.*;
public class SW
public static void main(String[] args) {
createAndShowGUI();}
private static void createAndShowGUI() {
JFrame frame = new JFrame("Hi..");
frame.setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);
JLabel label = new JLabel("Hello World");
frame.getContentPane().add(label);
frame.pack();
frame.setVisible(true);
```

3. Amaliy qism

3.1.Malumot bazasi tuzilmasi.

Microsoft Access da tayyorlangan.



ID	Ismi	Familiyasi	Guruhi	Fakulteti	Tugilgan_joyi	Xona_nomeri
1	Avazbek	Ubaydullayev	218-11	DIF	Namangan	201

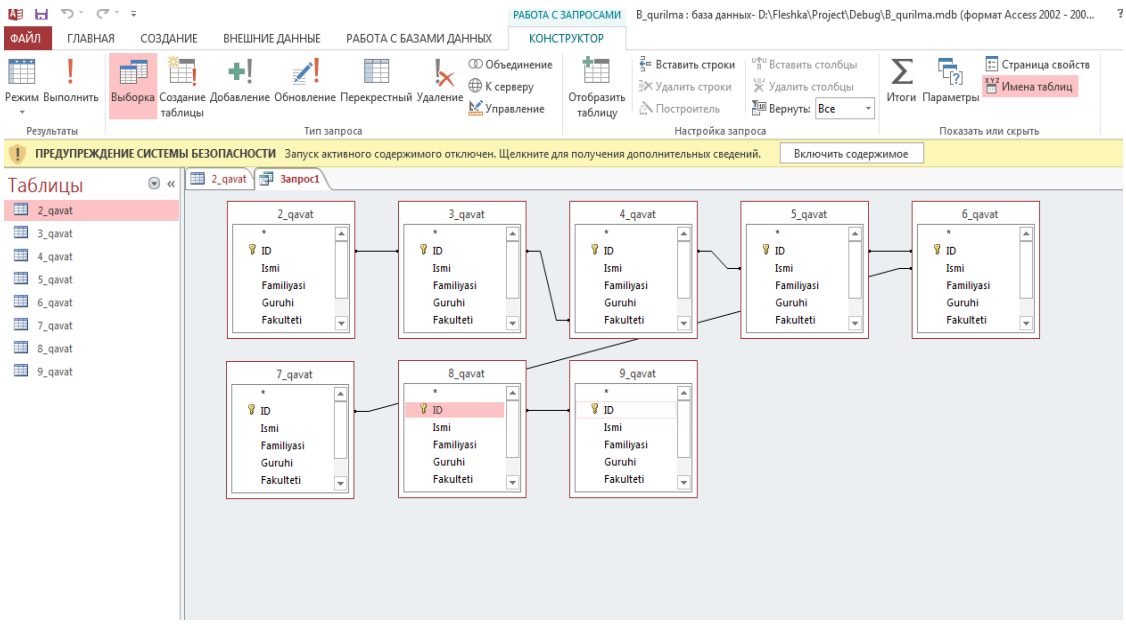
3.2. UML sxemasi.

UML - bu yangi Unifikatsiyalangan modellashtirish tili (Unified Modeling Language) bo'lib, Gradi Buch, Ayvar Yakobson va Djeyms Rambo (Grady Booch, Ivar Jacobson, James Rumbaugh) tomonidan ob'ektga-yo'naltirilgan loyihalash va taxlilni xujjatlashning yangi standarti sifatida taklif qilingan.



3.3 Dasturdan foydalanish

“Tizimli dasturiy taminot ” axborot tizimi ishga tushurish uchun uchun siz avval tuzulgan dasturning tayyor oynasiga kirasiz va siz u yerdan o’zizga kerakli bugan oynaga o’tish uchun shu oyna tugmasini bosasiz. Dasturning birinchi ounasi quydagi korinishda

Bu dasturni Admin va Foydalanuvchi tomonidan ishga tushurish mumkin siz agar admin sifatida dasturga kirsangiz siz Login va Parolni bilishingiz va shu login va parolni terib kirishingiz kerak buladi parol va login quydagi joyga teriladi.

Parol va loginni terib kirganizdan keyin sizda ushbu oyna yaniy Asosiy oyna ishga tushadi.

Asosiy oyna quydagi ko’rinishda bo’ladi.

Bu oyna to’rtta tugmadan iborat bo’lib siz bu yerdan ushbu tugmalar yordamida siz Talabalar turar joyining binolariga kirishingiz mumkin

A qurilma tugmasini bosganizda sizga ushbu oynani ochib beradi.

Siz bu oynada o’zizga kerakli bo’lgan qavatlar bilan tanishib chqishingiz mumkin.

Oynadan qaytish uchun 

yoki 
tugmasini bosishingiz kerak buladi.

Qavatlardan biri tugmasini bosganizda sizga ushbu oynani ochib beradi.

Siz jadvalga yangi talaba qo’shmoqchi bo’lsangiz uni malumotlarini kiritasiz kiritish quydagicha buladi siz avval 

tugmasini bosib malumot qo’shish oynasiga o’tasiz va malumotlarni kiritasiz qoshiladi

Malumotlarni to’liq kiritib bo’ganizdan keyin 

tugmasini bosib chiqasiz agar bu malubot bor bo’lsa yoki noto’gri kiritib qo’ysangiz 
tugmasini bosib qaytadan kiritasiz .

Dasturni ishga tushurish shulardan iborat

Xulosa

Men bu kurs ishini Java dasturlash tilidan foydalanib yaratdim. Bu dastur Talabalar turar joyini(TTJ) avtomatlashtiradi. Men bu kurs ishini Java dasturlash tili binary fayllardan foydalanib yaratdim. Bu dasturim avtomatlashtirilgan TTJ deb ataladi bu dasturda bu dasturda talabalar haqida ma'lumotlarni tez va oson toppish va kiritish tizimlari avtomatlashtirilgan.Biz bu dasturni tuzishdan maqsad TTJ ishini tez va yuqori sifatli xizmat ko'rsatish va kam vaqt qulay imkoniyatlarni berishi uchundir. TTJda bu dasturdan foydalanilsa kam ishchi kuchi va tezlikni oshirishga xizma qiladi .Men bu kurs ishini bajarish davomida Java dasturida o`zimga ozgina bo'lsa ham tushuncha oldim.

Xulosa qilib shuni aytishim mumkinki, kurs ishini bajarish davomida Java dasturlash tilii bilan yaqindan tanishdim. O'rgangan narsalarim keyingi o'qish va ish faoliyatimda kerak bo'ladi deb o'ylayman. Kurs ishini bajarish bilan cheklanib qolmay, Javani imkoniyatlarini yana chuqurroq o'rganishlikka xarakat qilaman.

Hozirgi kunda O`zbekistonda Informatsion Texnologiyalar va Axborot Texnologiyalarini rivojlantirish yo`lida bir talay ishlar amalga oshirilmoqda. Buni birgina bu sohada ishlab chiqilgan qaror, qonun va farmonlar misolida ham ko`rishimiz mumkin. Bizga "Informatika" fani o`tilayotgani ham bunga misoldir. Men bu kurs ishini bajarib ko`pgina bilimlarni o`rgandim. Bu dastur ishini bajaradigan dasturlar ko`p. Lekin bu dastur juda ahamiyatli. Xulosa qilib shuni aytish mumkinki kurs ishini bajarish davomida bir qator bilimlar egallandi va Javada bazaga ulash va u bilan amallar bajarish haqida ma`lumotga ega bo`ldim. Bu kurs ishini bajarish davomida men juda katta bilim va ko'nikmalarga ega bo'ldim. Bu olgan bilim va ko'nikmalarim kelajakda o'z kasbimning ustasi bo'lishimda yordam berishiga ishonchim komil
